

FIXED-SCOPE SERVICES WEBSITE OFFER

Complete Updated Services Website Tier Plan

Clear three-tier scope, complimentary launch value, and a practical customer-conversion path.

Tier 1 — ₱9,900 Tier 2 — ₱14,900 Tier 3 — ₱44,700
1–5 business-day target after complete client inputs and approvals

Updated 22 August 2026

1 Package framework and scope

Version: 22 August 2026

Delivery model: Fixed-scope services websites with provider-led setup

Delivery target: 1–5 business days after all required client information, approvals, assets, links, and domain direction are complete.

1.1 Purpose and fixed-scope principle

This plan covers three fixed website tiers for **service-based businesses**. Every tier is designed to present a credible brand, explain services clearly, direct visitors to an appropriate next step, and provide a complete responsive experience across mobile, tablet, and desktop.

The fixed scope protects both the client and provider: each tier states its public-page limit, approved content capacity, conversion workflow, included setup work, and exclusions before production begins. The client provides accurate business information and approvals; the provider performs the agreed configuration, design, implementation, quality assurance, and launch preparation.

Service-only boundary: These tiers do not include product catalogues, shopping carts, checkout, online payments, inventory, fulfillment, delivery management, or e-commerce order operations.

1.2 At-a-glance package comparison

Feature	Tier 1 — Essential Service Website	Tier 2 — Professional Service Website	Tier 3 — Premium Service Website + Operations Dashboard
Price	₱9,900	₱14,900	₱44,700
Fixed public pages	Exactly 3	Exactly 9	Exactly 11
Delivery target	1–5 business days	1–5 business days	1–5 business days
Primary conversion path	Website service/appointment/inquiry request to Google Sheets	Client-approved external service booking or inquiry link/widget	Direct public selection from live available service slots with dashboard capture
Service capacity	Up to 6 approved services	Up to 8 approved services	Up to 12 approved services
Approved image capacity	Up to 8	Up to 12	Up to 20
Genuine customer proof	Up to 3 client-supplied, permission-cleared items	Up to 5 client-supplied, permission-cleared items	Up to 8 client-supplied, permission-cleared items
Approved FAQs	Up to 5	Up to 8	Up to 12
Revision rounds	2 consolidated rounds	3 consolidated rounds	5 consolidated rounds
Staff/admin system	Not included	Not included	One owner/admin plus up to 5 active staff accounts and up to 5 bookable staff/resource calendars

1.3 Complimentary inclusions in every tier

Every tier includes the following value at no additional charge, subject to client approval and the stated boundaries.

Complimentary inclusion	What is included	Boundary
One-year .com domain	One standard .com registration for the first year, subject to availability and the selected registrar's rules.	Renewal fees, premium domains, transfers, and special domain extensions are outside the fixed inclusion.
SSL/HTTPS	Secure HTTPS configuration for the launched website.	The inclusion does not cover unrelated third-party platform security settings.
Launch-Ready SEO Setup	Core technical and on-page launch setup: page titles, descriptions, headings, basic indexing controls, and responsive performance checks within the approved site content.	It does not guarantee rankings, traffic, leads, Google Business Profile ranking, backlinks, content marketing, or ongoing SEO campaigns.
Complete footer	Approved business name/logo, quick links, contact details, social links, legal/privacy link, copyright, and a route-appropriate call to action.	Client supplies verified final contact, social, and legal/policy information.
Optional one-page Location Page	One branded location-focused page or approved separate location property with client-approved address/service area, map, directions, hours, contact, and brand content.	This is optional and separate from the core public-page count unless expressly counted in a signed scope. It is not a Google Business Profile and is never described publicly as AI-generated.
Google Reviews pathway	A branded Review us on Google action that opens the client-approved Google Business Profile or Google Maps review destination in a new tab.	The client supplies and approves the destination link. Google controls sign-in, review publication, ratings, moderation, and review removal. The website does not create, scrape, copy, edit, seed, or guarantee reviews.

1.4 Tier 1 — Essential Service Website

1.4.1 Investment and purpose

₹9,900 for exactly **3 public pages**. Tier 1 is for a local provider, clinic, studio, professional, or service business that needs a polished public presence and a dependable way to capture service, appointment, meeting, quote, or general inquiry requests.

1.4.2 Fixed public-page structure

Page	Purpose
1. Home	Brand introduction, hero message, value proposition, service highlights, selected visual content, proof points based only on approved facts, Google Reviews call to action, and primary conversion action.

Page	Purpose
2. Services	Up to 6 approved services with concise descriptions, selected imagery where supplied, and clear request actions.
3. Contact / Request a Service	Service request, appointment request, meeting request, quote request, or general inquiry form; verified contact details; fallback contact route; and clear next-step messaging.

1.4.3 Included scope

Tier 1 includes responsive UI/UX, up to 6 approved services, up to 8 approved images, up to 3 genuine client-supplied and permission-cleared proof items, up to 5 approved FAQs where appropriate, complete approved footer, Google Reviews pathway, and two consolidated revision rounds.

The provider creates and configures the Google Sheet request tracker and connects the website form through a server-mediated flow. The form can collect client-approved fields such as name, contact information, selected service, preferred date/time suggestion, message, and consent. Validation, loading feedback, truthful success/error messaging, and a fallback contact path are included.

1.4.4 Tier 1 request workflow

Visitor sends a service or appointment request → the website records the request in the configured Google Sheet → the business reviews it and follows up directly.

The Google Sheet records a request. It does **not** reserve a live slot, confirm an appointment, process payment, issue invoices, manage service delivery, create a calendar event, or operate as a full CRM.

1.4.5 Tier 1 client inputs

The client provides business name, niche, target audience, approved domain options, business description, key message, primary call to action, up to 6 services, verified contact details, hours, service area or directions link, social links, approved logo, up to 8 approved images, form purpose and fields, fallback contact path, Google email address for tracker access, Google review destination, and final written approval.

1.5 Tier 2 — Professional Service Website

1.5.1 Investment and purpose

₹14,900 for exactly **9 public pages**. Tier 2 is for a growing service business that needs deeper credibility content, more complete service education, and a direct connection to an existing client-approved external booking, scheduling, or inquiry provider.

1.5.2 Fixed public-page structure

Page	Purpose
1. Home	Brand promise, key services, approved proof, imagery, Google Reviews pathway, and primary action.
2. About	Approved business story, values, approach, credentials, and differentiators.

Page	Purpose
3. Services	Up to 8 approved services in an organized service architecture.
4. Service Detail	Expanded presentation of one priority service group.
5. Gallery / Portfolio	Curated presentation of up to 12 approved images or portfolio examples.
6. Customer Proof	Up to 5 genuine, permission-cleared client-supplied testimonials or approved trust content only.
7. FAQ	Up to 8 approved questions and answers.
8. Contact	Verified contact details, hours, location/directions information, social links, and fallback inquiry route.
9. Book / Inquire	Dedicated page directing visitors to the official client-approved third-party booking, scheduling, or inquiry action.

1.5.3 Included scope and booking boundary

Tier 2 includes responsive UI/UX, up to 8 approved services, up to 12 approved images, up to 5 genuine proof items, up to 8 FAQs, three consolidated revision rounds, all complimentary inclusions, and prominent calls to the client-approved external booking/inquiry path.

The external provider remains responsible for live availability, booking confirmation, payments, customer records, reminders, cancellation rules, user accounts, and any platform support. Tier 2 does **not** build a custom booking backend, live calendar engine, payment system, scheduling dashboard, staff portal, or customer-account system.

1.5.4 Tier 2 client inputs

The client provides everything required for Tier 1 where relevant, plus approved About content, values/history, up to 8 services, one priority service for the detail page, up to 12 images, up to 5 genuine proof items, up to 8 FAQs, approved external booking/inquiry URL, compatible widget details if applicable, Google review destination, brand direction, and final approval.

1.6 Tier 3 — Premium Service Website + Operations Dashboard

1.6.1 Investment and purpose

₱44,700 for exactly **11 public pages**, plus a fixed service-booking and operations dashboard foundation. Tier 3 is for an established service business that needs richer brand presentation and a direct service-booking journey where visitors choose from live available slots.

1.6.2 Fixed public-page structure

Page	Purpose
1. Home	Premium brand promise, service pathways, approved proof, featured work, FAQ teaser, Google Reviews pathway, and primary booking action.
2. About	Full approved company story, history, mission, values, approach, and differentiators.

Page	Purpose
3. Services Overview	Up to 12 approved services organized for clear customer selection.
4. Service Detail 1	Detailed presentation of the first priority service.
5. Service Detail 2	Detailed presentation of the second priority service.
6. Service Detail 3	Detailed presentation of the third priority service.
7. Team & Company	Approved team roles, bios, credentials, and company information.
8. Gallery / Portfolio	Up to 20 approved images, case-study visuals, service examples, or facility visuals.
9. Customer Proof & Featured Work	Up to 8 genuine, permission-cleared proof items plus approved case studies or featured work.
10. FAQ & Locations	Up to 12 FAQs plus approved location, facility, service-area, address, hours, map, and directions content.
11. Contact / Book	Verified contact details, directions, social links, and direct live-slot booking entry.

1.6.3 Included Tier 3 operations system

Tier 3 includes a custom fixed-scope service operations dashboard. It supports one owner/admin account, up to 5 active staff accounts, and up to 5 bookable staff or resource calendars. The public site allows visitors to choose from currently available service slots. The dashboard supports service-booking review, availability management, staff/resource assignment, booking status handling, schedule views, and operational overview metrics.

The fixed notification model is **in-dashboard only**. The system does not include client email notifications, SMS, marketing automation, payment processing, e-commerce checkout, product orders, inventory, fulfillment, delivery tracking, marketplace integrations, or a general-purpose CRM.

1.6.4 Tier 3 booking and dashboard boundary

Visitor selects an available service slot → the system prevents conflicting confirmed allocations → the booking is captured in the operational dashboard → the owner/admin and assigned staff manage the next step in-dashboard.

The public booking journey and dashboard are limited to the approved service workflow. Any expansion beyond the fixed user cap, booking model, calendar/resource count, payment processing, new notification channels, customer accounts, additional roles, integrations, analytics suite, or automated campaigns requires a separate scope and quotation.

1.6.5 Tier 3 client inputs

The client provides everything relevant to Tiers 1–2, plus company history, mission/values, up to 12 services, content for 3 priority service pages, approved team information, staff-user list and role approvals, service durations, availability rules, booking statuses, cancellation policy, up to 20 images, location/facility

information, up to 8 genuine proof items, up to 12 FAQs, Google review destination, and final written acceptance of the dashboard workflow.

1.7 Provider-led setup and client responsibilities

Provider responsibilities	Client responsibilities
Configure the agreed site structure, responsive design, CTA paths, approved forms or booking path, domain direction, core SEO setup, SSL/HTTPS, footer, Location Page when selected, Google Reviews link, testing, and launch preparation.	Supply complete, accurate, authorized, and approved business details, services, text, images, legal/policy content, locations, contact details, social links, domain options, booking links/availability rules where applicable, Google Review destination, and final approvals.
Create and configure the Tier 1 Google Sheet tracker; label or remove any provider-authorized integration-test record; share access to the client-approved Google email after setup.	Provide the Google email address that should receive Tier 1 Sheet access. No client password is required.
Build the Tier 3 fixed dashboard and booking workflow according to the confirmed scope.	Confirm staff users, roles, services, scheduling rules, booking rules, and operational acceptance criteria before Tier 3 development begins.

1.8 Quality assurance and acceptance

Before handover, the provider verifies approved content placement, responsive layout, primary CTA behavior, form or booking-path behavior, visible loading/success/error messaging, links, maps/directions where included, Google Reviews destination, navigation, footer, and core page metadata within the fixed scope.

Client acceptance depends on the client reviewing the agreed site against the approved content and scope. Change requests outside the stated tier capacity, public-page limit, user cap, workflow, integration boundary, or revision rounds are documented and quoted separately before implementation.

1.9 General exclusions and integrity rules

The following are excluded from every tier unless separately agreed in writing:

- Fabricated, purchased, copied, or unverified testimonials, ratings, reviews, case studies, or customer claims.
- Review scraping, automated copying of Google reviews, or a promise of a particular review rating, number of reviews, Google ranking, traffic, lead volume, or sales outcome.
- E-commerce catalogues, carts, checkout, payments, inventory, fulfillment, delivery operations, and order management.
- Ongoing advertising, social-media management, content marketing, SEO campaigns, backlink services, legal review, regulatory certification, or ongoing support plans not expressly stated in a separate agreement.
- Premium domain purchase costs, renewal fees after the first included year, third-party subscription costs, booking-platform fees, payment-provider fees, external platform charges, and paid media costs.
- Major copywriting, photography, videography, branding, translation, new integrations, custom automations, extra pages, extra revision rounds, or expanded dashboards beyond the approved tier scope.

1.10 Approval checklist

Before production begins, confirm the following:

1. Selected tier and price.
2. Preferred domain options and authorized registrant details.
3. Business name, logo, brand direction, approved services, approved content, approved images, and contact information.
4. Approved primary CTA and form/booking workflow.
5. Verified map/location/directions information if the optional Location Page is selected.
6. Direct Google Business Profile or Google Maps review link for the complimentary Google Reviews pathway.
7. Tier-specific booking/integration inputs and third-party credentials only where required.
8. Final written content and scope approval before build completion.

Result: A fixed, service-focused website package with a clear conversion path, professional presentation, truthful operational boundaries, and complimentary launch essentials across all three tiers.
